1 Introduction

Introduction text

2 Analysis

2.1 Problem analysis

2.2 Literature analysis

2.3 Lithuania's parliament open data analysis

2.4 Method analysis

2.4.1 MDS

2.4.2 Unsupervised learning: *k*-means clusterization

Due missing labels of this dataset we are forced to look into unsupervised machine learning methods. *k-means* clusterization [?] is one such method and it fits well with our features. This is due TFIDF which transforms text into vectors be used with *k-means*. For distance between comments we can use cosine similarity [?] due its nature of performing better when comparing texts. To compare we can try with Euclidian and Manhattan distances too.

2.5 Visualizations

3 Software design

3.1 Components of system

3.1.1 Data flow diagram

Data flow diagram

3.2 Tools

3.2.1 Programming language: Scala

3.2.2 Database: MySQL

3.3 Downloader

3.4 Coordinator

3.5 API server

3.6 Repository

3.7 User interface (Frontend)

4 Description of experimental research

4.1 Data

4.1.1 Data semantics

4.1.2 Data statistics

4.2 Experiments

4.2.1 MDS

4.2.2 Unsupervised learning: k -means clusterization

4.3 Results
